Dear Uber Hiring Manager,

As a software engineer with both professional experience in web applications and working on a documentary about Uber's global impact, working at Uber would be an amazing experience. I'm writing this in addition to a recommendation from a current Uber employee for the 2019 Software Engineering Internship/Co-op position posted on Uber's career website.

My first year, I was approached by a friend who, along with two CNN journalists, were interested in traveling to Cancun, Mexico to document the impact Uber had made on the massive taxicab system there. What we discovered is: Uber's disruptive technology is rapidly changing the taxi union, forcing it to improve to compete. I'm interested to learn more about the factors behind Uber's success and to improve both my web and app development skills in a professional environment.

With design thinking training from UIF, a Stanford Design School Fellowship, I incorporate human-centered design into my projects. In addition to my intern project, I made significant suggestions to improve the Screencast Web Player by using a design project from two years prior, Google Analytics, and insights from a similar project in a different department. I presented the changes to my team, QA, and upper management.

Finally, I'm incredibly excited for this opportunity to learn at Uber. Please feel free to contact me through phone or email if you have any questions.

Best regards,
Matthew Lim
