Dear Monica Jimenez or Autodesk Recruiter,

As a computer engineer who has flourished in the intersection of hardware, software, and design and a former Autodesk intern, I would love for the opportunity to work and learn at Autodesk again. I am applying for the Software Development, Inventer Platform (ID 19WD31436) Intern position for the Summer of 2019 which I found through the Autodesk Career website.

I have an excellent familiarity of C++, primarily due to it's usage in several of my computer engineering classes as well as it being my first programming language. Several of my classes used gtest in order to generate test cases so I have experience with test cases as well. During my previous internship at Autodesk, I worked on a web application with a large backend system and became familiar with networking and creating test environments in a team-based scrim environment. I also communicated with the UX team from Autodesk Design Academy and DHX's data analytics team to help influence my end project. As an intern, I can offer a competent software engineer with knowledge of low-level languages and a love of multidisciplinary teamwork.

As a side note, I really enjoy creating communities and volunteering as an intern. At Autodesk I organized a Korean Fried Chicken going away dinner for all the interns (15+ interns) and cooked for the whole group in Autodesk Pier 9's test kitchen which I had to recieve fire safety training and food safety training for. During my volunteer hours, I did volunteer work for unprivledged LGBTQIA+ youth (Maven Youth Program) and helped run some of their workshops. It was a great cause and I'm excited to be a part of Autodesk's volunteer program again!

I'm very excited for the opportunity to learn and I look forward to hearing back from you! Feel free to contact me by email or phone.

Best regards,
Matthew Lim
