Dear Mozilla Hiring Manager,

As a computer engineer who has flourished in the intersection of technology, design, and media, I would love for the opportunity to work and learn at Mozilla. I am applying for the Javascript Engineering Internship for the Summer of 2019 posted on the Mozilla Career site.

I've always believed in human centered design, especially in programming. During my time at Design Bloc I was trained in Design Thinking principles both through work and an intensive semester long program with the Stanford Design School. And at Autodesk, I reached out to the data analytics division to access Google Analytics and senior UX designers to influence my decisions with the Screencast Player. On top of my work, I presented a new player concept to my team and suggested to the Director that we open source the project.

Self-taught in motion graphics and video production, I worked professionally for Purdue Engineering's Marketing team, created motion graphics at my time at Autodesk, and currently work making video content at Design Bloc. With my web app development background, experience in design and motion graphics, and data analysis, I believe that I would be a fantastic candidate for this position.

I'm very excited for the opportunity to learn and I look forward to hearing back from you! Feel free to contact me by email or phone.

Best regards,
Matthew Lim
